www.thanhlelmtp2006.id.vn github.com/lethanh2006

SUMMARY

Full Stack Developer and third-year IT student at PTIT, currently a Frontend Developer at A.I-SOFT. Builds products end to end: Next.js/React frontends, NestJS APIs on PostgreSQL and MongoDB, a React Native Android app, and Docker deployments with CI/CD, monitoring and automated backups.

EDUCATION

Posts and Telecommunications Institute of Technology (PTIT) 2024 - 2028

Information Technology
Third-year student at PTIT with GPA: 3.2 / 4.0

CERTIFICATES & AWARDS

Top 1, RMIT AI & Security Hackathon	2026
Top 16, RMIT AI & Security Hackathon	2025
Freshman Year Academic Scholarship	2025

TECHNICAL SKILLS

Frontend	ReactJS, Next.js (App Router), TypeScript, Redux, SWR, TailwindCSS, Ant Design, UmiJS, Socket.io client
Backend & Architecture	Node.js, NestJS, REST, WebSocket (Socket.IO), Microservices, API Gateway, BFF pattern, Outbox pattern, Swagger
Mobile	React Native, Expo
Databases & Messaging	PostgreSQL, MongoDB, Redis, RabbitMQ, TypeORM (migrations)
Security	JWT (HttpOnly cookies), RBAC, OAuth2 / Google Sign-In, 2FA, Rate Limiting, CORS, Validation
DevOps & Infrastructure	Docker, Nginx, Cloudflare, CI/CD (GitHub Actions), VPS (Linux), Vercel, Render, Prometheus, Grafana, OpenTelemetry, Cloudinary
Testing & Tools	k6, Postman, Git, GitHub, GitLab

WORK EXPERIENCE

A.I-SOFT 11/2025 - 08/2026

Frontend Developer

- Developed diploma/certificate lookup interfaces for partner institutions including APD University, VinUni, and the Posts and Telecommunications Institute of Technology (PTIT), based on Figma designs, ensuring accuracy in layout, color, and user experience.
- Built and developed admin dashboard interfaces on the company's UmiJS base platform, including the VinUni dormitory management system and a portal for Tra Ly Ward officials to manage residents completing administrative procedures (queue/ticket-number flow, citizen-booked appointments, and document processing counter by counter).
- Collaborated closely with the Backend (BE) team: proactively studied and understood the business flow of each system before implementation, aligned on data structures, and integrated APIs to complete interface functionality.

- Participated in the full frontend development process: building interfaces from designs, implementing logic, integrating dynamic data, and testing/optimizing user experience across internal admin systems and public-facing portals.

PROJECTS

GoDa JLPT — Japanese Learning Platform (JLPT N5–N1) 10/2026 - Present

Full Stack Developer (Personal project)

Tech stack: Next.js 16, React 19, TypeScript, Tailwind CSS 4, SWR, NestJS, TypeORM, PostgreSQL 17, Docker, Vercel, Render, Neon

- Built a full-stack web app for Vietnamese learners of Japanese: JLPT N5–N1 mock exams and practice, flashcard vocabulary lessons with FSRS spaced repetition, and a Japanese–Vietnamese dictionary with Sino-Vietnamese (Hán Việt) readings and kanji breakdown.
- Designed a NestJS + TypeORM REST API on PostgreSQL with 12 modules, versioned migrations and Swagger docs; wrote an idempotent seed pipeline loading ~8,470 questions, 10 mock exams, ~23,200 words and 2,383 kanji.
- Implemented the exam engine: timed exam and practice modes, answer autosave, scoring with estimated JLPT score and per-question-type analysis; guest attempts are attached to the account after sign-in.
- Secured the app with JWT in HttpOnly cookies, Google Sign-In with explicit account linking, admin roles, rate limiting and DTO validation; the Next.js App Router frontend proxies */api* on the same origin so cookies stay first-party without CORS.
- Deployed the frontend on Vercel and the Dockerized API on Render with Neon PostgreSQL; migrations run automatically on startup.

Backend: https://github.com/lethanh2006/BE_GODA

NRApp — Company Employee Utility Platform 2025 - 2026

Full Stack Developer (Web, Backend & Android)

Tech stack: Node.js 22, NestJS 11, MongoDB Atlas, PostgreSQL, Redis, RabbitMQ, Docker, Nginx, Next.js, TypeScript, React Native (Expo), Socket.IO

- Built the Admin and Employee web portals with Next.js/TypeScript using a Backend-for-Frontend (BFF) pattern with HttpOnly cookies and a Socket.IO client for real-time chat, plus an Android app (React Native/Expo) for work schedules, tasks, canteen, chat and QR check-in.
- Designed and deployed a microservices backend of 9 NestJS 11 services on Docker Compose (Ubuntu 22.04 VPS), covering authentication, user management, mail, chat, task, scheduling, canteen, payment and observability, using MongoDB Atlas, PostgreSQL, Redis, and RabbitMQ.
- Built an Nginx HTTPS → API Gateway architecture handling JWT/OAuth2/RBAC authorization, validation, and Redis-backed caching and rate limiting (including OTP email anti-spam), proxying REST/Socket.IO traffic to internal services, with structured JSON logging and request-ID tracing.
- Set up monitoring with Prometheus, Grafana, and node_exporter (CPU/RAM/disk every 60s), OpenTelemetry traces and Loki logs, container health checks, and per-service CI/CD pipelines (GitHub Actions) with automatic rollback on failed rollouts.
- Automated encrypted (Age, SHA-256-verified) daily backups of MongoDB Atlas and Redis via systemd timer, with a 14-day/7-backup local retention policy and 30-day GitHub Actions artifact retention; rehearsed MongoDB restore.
- Load-tested 3 read-only REST APIs with k6, achieving ~26.5 RPS at 50 concurrent virtual users with a 100% request success rate over a 3-minute sustained test.

Personal Portfolio Website

Frontend Developer

Tech stack: HTML5, CSS3, JavaScript

- Designed a responsive one-page personal portfolio/CV site with Light/Dark theme switching saved via LocalStorage, IntersectionObserver reveal animations, and a dedicated print stylesheet for exporting the page as a CV PDF.
